Jamal Saeedi

Contact Information

Address: Via delle Aie 4, 6900 Lugano, Switzerland Website: <u>https://jamal-saeedi.github.io</u> Summary Email: jamal.saeedi@idsia.ch ; jamal.saeedi7@gmail.com Phone: +41768307371

He is a skilled and experienced engineer with a Ph.D. in Electronic Engineering from Tehran Polytechnic. His career highlights expertise in a broad range of technologies, including signal and image processing, computer vision, machine learning, and deep learning. He has applied his expertise to solve challenging problems in diverse fields such as road traffic monitoring, automated quality control and visual inspection (anomaly detection), time series forecasting for finance, 3D computer vision, remote sensing (synthetic aperture radar imaging), and object detection and tracking in video sequences.

Experiences

Work

- Postdoctoral researcher at Swiss AI Lab IDSIA (Istituto Dalle Molle di Studi sull'Intelligenza Artificiale), Lugano, Switzerland, (Jan 2019 – Present).
 - Participated in the design and implementation of multiple automated visual inspection and quality control projects for steel, electromechanical, and textile products through the development and application of cuttingedge deep learning, signal processing, and computer vision techniques.
 - ♦ Contributed to various projects involving object detection and tracking, 3D surface matching, microwave image reconstruction, and time series forecasting for financial assets.
- Signal and image processing engineer at Towzin Electric Company (TEC), Tehran, Iran, (June 2016 November 2018).
 ♦ Contributed to the design and construction of the first Iranian High-Speed Weigh in Motion system (September 2016).
 - Involved in the design and implementation of real-time license plate recognition software, (March 2017).
- **Research associate** at Information and Communication Technology Research Center (ICTRC), Tehran, Iran, (March 2016 June 2016).
- **%** Signal processing engineer at Pardis Electronic Development Co., Tehran, Iran, (September 2011 January 2015).
 - ♦ Played a role in the design and construction of the first Iranian Synthetic Aperture Radar (IRSAR/N-1) (July 2013).
 - ♦ Contributed to technology transfer for a pulsed mode SAR system (2012-2013).
- **Research assistant** at Machine Vision Research Lab. (MVRL) under the supervision of Prof. Karim Faez, Electrical Engineering Department, Amirkabir University of Technology, (September 2007- September 2015).
 - \diamond Obtained M.Sc. and Ph.D. degrees in electrical engineering in 2010 and 2015, respectively.
 - \diamond Published ten ISI journal papers and seven conference papers in various research areas.

Volunteering

- **Reviewer** for IEEE, Elsevier, Springer, IET, Taylor & Francis, and World Scientific journals on signal and image processing, computer vision, and remote sensing (2012 Present).
- **Evaluator** of knowledge-based companies at Presidential Deputy for Science and Technology, Tehran, Iran (February 2017 December 2019).

Education

Academic Degrees

Doctor of Philosophy (Ph.D.) in Electrical Engineering

- Amirkabir University of Technology (*Tehran Polytechnic*), Tehran, Iran. Total GPA: 3.67/4.
- C Thesis Title: "Synthetic Aperture Radar Signal Processing Using Nonlinear Frequency Modulation and Phase Error Compensation," Score: 19.50/20. [pdf]

Master of Science (M.Sc.) in Electrical Engineering

- Amirkabir University of Technology (Tehran Polytechnic), Tehran, Iran. Total GPA: 3.34/4.
- CR Thesis Title: "Image Fusion in the Multi-Scale Transforms Domain Using Fuzzy Logic and Particle Swarm Optimization," Score: 20/20. [pdf]

September 2015

January 2010

1

2

September 2007

Bachelor of Science (B.Sc.) in Biomedical Engineering

Sahand University of Technology, Tabriz, Iran.

CR Thesis Title: "Adaptive Control Using NARMA-L2 Model for Nonlinear Systems," Score: 19/20. [pdf]

Skills, Language, and Awards

Skills

- **Programming Languages:** Python (proficient), C/C++ (intermediate), MATLAB (proficient)
- Development Environments (IDEs/Editors): Experienced with Visual Studio Code, PyCharm, Jupyter Notebook, Qt, Visual Studio, Eclipse, MATLAB/Simulink, and Maple.

Machine Learning and Deep Learning:

- Excellent knowledge of Supervised methods (Classification, Regression), Unsupervised methods (Clustering, 0 Feature Selection, Dimensionality Reduction) and Self-supervised learning.
- Experienced in designing and implementing CNNs for image and video analysis, including classification, object 0 detection, and semantic segmentation. Skilled in Autoencoder development for anomaly detection, image denoising, and feature learning. Expertise in deep learning model architecture, hyperparameter tuning, image augmentation, and transfer learning. Familiar with time-series forecasting using deep learning and machine learning techniques. Proficient in data cleaning, imputation, feature engineering, and machine learning models for data science projects.
- Skilled in using Scikit-learn, Pyod, SciPy, TensorFlow, Keras, TensorBoard, PyTorch, PyTorch Lightning, 0 Albumentations, Imgaug, Comet, MLflow, Pandas and LightGBM for building and deploying machine learning and deep learning models.

Computer Vision and Image Processing:

- Expertise in various computer vision tasks, including Image reconstruction, 3D surface matching, depth estimation, SLAM, multi-sensor image fusion, object detection (instance segmentation) and tracking, semantic segmentation, visual inspection, image registration, template matching, and image enhancement.
- Proficient in utilizing OpenCV, Scikit-image, and Kornia for image and video analysis.
- Competent in using Open3D and Point Cloud Library (PCL) for point cloud data processing. 0

Signal Processing:

- o Proficient in Synthetic Aperture Radar (SAR) signal processing, biomedical signal analysis (ECG, EEG), speech signal processing, and dynamic load-cell signal processing for vehicle weight estimation.
- Skilled in using a comprehensive set of signal processing libraries, including NumPy, SciPy, Matplotlib, Scikit-signal, 0 PyWavelets, FilterPy, and Wavelets, covering a wide range of signal processing tasks.

Ø Optimization Algorithms:

Proficient in particle swarm optimization (PSO) and Genetic algorithms for solving complex optimization problems. 0 Experienced in utilizing Python libraries such as DEAP, PySwarm, and PyGMO for implementing and solving optimization tasks.

5 Technologies and Frameworks:

- Infrastructure: Proficient in Linux, Microsoft Windows (WSL2), and Docker for containerized microservices. 0
- Version Control: Experienced in collaborative coding using GitHub and GitLab. 0
- Web Development: Proficient in Flask and FastAPI for building APIs and ZeroMQ for efficient messaging. 0
- Data Analysis: Skilled in data manipulation and analysis using Pandas, Seaborn, and Numpy. 0
- Parallel Programming: Proficient in multithreading and multiprocessing for optimizing program performance. 0

- o GPU Computing: Experience with CUDA Processing for parallel computing on GPUs.
- **Other relevant skills:** Problem-solving, teamwork, communication.

Language

- S Persian (native)
- S English (full professional proficiency)
 - o TOEFL iBT: total 100 (Reading 23/30, Listening 29/30, Speaking 24/30, Writing 24/30)
- 🕫 Italian (B1)

Honors and Awards

- S Member at Iran's National Elites Foundation (BMN), (April 2016 Present).
- Scholarships for PhD and Master Educations, granted for top students in entrance exam, granter: Iranian government, (Sep 2010 and Sep 2007).

Selected Projects and Academic Works

Istituto Dalle Molle di Studi sull'Intelligenza Artificiale (IDSIA), Lugano, Switzerland

- Initiated a project to enhance the quality control process for laser-cut steel products by employing cuttingedge technology. Utilizing a state-of-the-art deep learning encoder, based on multi-scale vision transformers, combined with machine learning regression, we aim to precisely estimate burr height and edge roughness.
 Conducted a feasibility study on pipe inspection, employing advanced techniques such as normalizing flow *Februrary*
 - to estimate 2D image distribution of normal samples for enhanced defect detection and localization.2024Collaborated with our implementation partner to develop and submit an Innosuisse proposal for a promisingproject opportunity.
- Design and implementation of anomaly detection and localization for textile products using self-supervised learning based on defect augmentation.
 - Utilized a self-supervised deep learning framework to train a two-class classifier for anomaly detection January in textile products.
 - Implemented a novel approach employing self-supervised deep segmentation using the UNET architecture to localize defects, surpassing the results obtained with the Grad-CAM algorithm and the trained classifier.
 - Results led to one conference paper.
- #Contributed to the design and implementation of multiple object detection and tracking project for sportsFebruaryvideo analysis, focusing exclusively on the human class, by leveraging Detectron and Deep SORT algorithms.2023
- H Depth estimation and 3D surface matching using multiple focal images.
 - Developed a system capable of recognizing and locating objects with a predefined shape and accurately estimating their positions for robotic gripping.
- Hesign and implementation of microwave image reconstruction using deep Learning approach.
 - Proposed an architecture to address the electromagnetic inverse scattering problem, training it on data collected by receivers on the measurement surface.
- # Design and implementation of anomaly detection for zipper cursors and electromechanical componentsMarchinspection based on convolutional autoencoder.2021
 - Implemented various semi-supervised deep learning approaches, including autoencoder, variational autoencoder, generative adversarial network, and deep feature-based one-class classification, for anomaly detection.
 - Incorporated a rigid image registration technique based on correlation maximization for image alignment purposes.
 - Results led to one conference paper and one journal paper.
- ℜ Design and implementation of a time-series forecasting approach for mid-term ranking and July 2020 recommendation of financial assets using deep learning and machine learning forecasting techniques.

July 2022

June 2023

April 2022

Ħ	Design and implementation of visual inspection and measurement for different steel types for an industrial	June 2019
	inspection project.	
	 Developed a convolutional neural network for estimating surface roughness and detecting defects in 	
	electrical discharge machining steel.	
	 Resulted in one journal paper. 	
ж	Design and implementation of image similarity-based house recommendation system using deep learning framework	January 2019
Towzi	n Electric Company (TEC), Tehran, Iran.	
Ħ	Designed and implemented a real-time license plate recognition and vehicle dimension estimation system for a road monitoring project.	August 2017
	 Leveraged image processing and deep learning for real-time, high-accuracy license plate recognition. Preprocessed camera frames, employed background subtraction, and implemented Cascade SVM for character recognition. Designed system to estimate vehicle velocity. 	
Ħ	Developed and implemented real-time signal processing algorithms for a high-speed weigh-in-motion project. The algorithms encompass vehicle velocity estimation, axle detection, calibration, weight	July 2016
	estimation, and vehicle class determination.	
	 I led a multidisciplinary team to develop a dynamic WIM system from scratch, focusing on accurate data acquisition through advanced signal processing techniques, adaptive filtering, and machine learning-based regression models for dynamic weight calibration. 	
Pardis	s Electronic Development Co., Tehran, Iran	
Ħ	Designed and implemented signal processing algorithms for image formation, motion compensation, and autofocusing in a stretch-based pulsed mode synthetic aperture radar.	May 2015
	 This work led to the production of three technical reports and one journal paper. 	
Ħ	Conducted research on synthetic aperture radar signal processing and design considerations.	
	 Explored design considerations for synthetic aperture radar imaging on various platforms such as UAV (FMCW mode), airborne (FMCW and Pulsed modes), space-borne (Pulsed mode), and missile-borne (Pulsed mode) 	Sept. 2013
	 Simulated raw data for different synthetic aperture radar scenarios, including point targets and distributed targets 	Jan. 2015
	 Implemented various time and frequency domain signal processing algorithms, such as Omega-k, 	
	Range Doppler, Frequency Scaling, Time Domain Correlation, and Back projection. These algorithms were simulated for both continuous wave (used in UAV SAR) and pulsed modes (used in airborne, space-borne, and missile-borne SARs).	
	 Processed real SAR data from different platforms, including UAV, airborne, and space-borne (ERS1-2, RADARSAT, and COSMO-SkyMed). 	
	 Implemented motion compensation techniques for phase error correction using GPS data for both time and frequency domain algorithms. 	
	 Implemented phase gradient autofocus algorithm for spotlight data and phase curvature autofocus algorithm for stripman SAB data 	
	 Achieved real-time implementation of various signal processing algorithms using Graphics Processing 	
	Unit (GPU).	
	 Designed Synthetic Aperture Radar Simulators for testing hardware components in both FMCW and Pulsed modes. 	
	 This extensive research resulted in eight technical reports and two journal papers. 	
Machi	ine Vision Research Lab. (MVRL), Amirkabir University of Technology, Tehran, Iran	
Ħ	Proposed a new method for deceptive jamming of synthetic aperture radar, resulting in one technical report and one journal paper.	Sept. 2014

- Proposed a new method for motion compensation of synthetic aperture radar signal imaging as part of a Nov. 2013
 Ph.D. thesis at Amirkabir University of Technology, resulting in two journal papers.
- Proposed a new method for synthetic aperture radar signal processing using nonlinear frequency October modulation chirp as part of a Ph.D. thesis at Amirkabir University of Technology, resulting in one conference 2013 paper and one journal paper.
- Estimated power spectrum of a signal impinging on an array of M sensors using MVDR, MMSE, and MUSIC August
 beamformer as a project for the Statistical Signal Processing course at Amirkabir University of Technology, 2011
 resulting in one technical report.
- Proposed a new method for EEG signal compression and implemented a journal paper titled "Iterative July 2011 function system and genetic algorithm-based EEG compression" as part of a project for the Biomedical Signal Processing course at Amirkabir University of Technology, resulting in one technical report and one journal paper.
- ℜ Proposed a new method for voice activity detection as a project for the Machine Learning course at June 2011 Amirkabir University of Technology, resulting in one technical report and one journal paper.
- Implemented a 3D reconstruction algorithm from multiple calibrated images, object tracking in video May 2011 sequences using particle filter, and stitching photo mosaics to produce panorama pictures as projects for the 3D Computer Vision course at Sharif University, resulting in three technical reports.
- Introduced a neural network for speech enhancement and implemented a journal paper titled "Wavelet February speech enhancement based on time-scale adaptation" as part of a project for the Robust Speech Processing 2011 course at Amirkabir University of Technology, resulting in one technical report.
- # Implemented speech signal compression using wavelet and speech recognition using HMM classifier as a
project for the Speech Processing course at Amirkabir University of Technology.2011
- Proposed a new method for infrared and visible image fusion as part of an M.Sc. thesis at Amirkabir Nov. 2010
 University of Technology, resulting in one IEEE conference paper and one Elsevier journal paper.
- Proposed a new method for multi-focus image fusion as part of an M.Sc. thesis at Amirkabir University of July 2010
 Technology, resulting in two conference papers and one Springer journal paper.
- # Proposed a new method for remote sensing image fusion as part of an M.Sc. thesis at Amirkabir UniversityFebruaryof Technology, resulting in one Elsevier journal paper.2010
- Proposed a new method for document image segmentation and implemented a journal paper titled "Text October
 Extraction and Document Image Segmentation Using Matched Wavelets and MRF Model" as part of a project for the Computer Vision course at Amirkabir University of Technology, resulting in one IEEE conference paper.
- Introduced fuzzy logic for image enhancement and implemented two journal papers titled "A fuzzy noise March reduction method for color images" and "A New Fuzzy-based Wavelet Shrinkage Image Denoising 2009 Technique" as part of a project for the Wavelet course at Amirkabir University of Technology, resulting in two conference papers and one Elsevier journal paper.
- Implemented generalized fuzzy Hough transform, fuzzy edge detection, and fuzzy-neural system as a project July 2008 for the Fuzzy Systems course at Amirkabir University of Technology, resulting in three technical reports.

Sahand University of Technology, Tabriz, Iran

Designed an adaptive control for a nonlinear system and implemented a journal paper titled "Adaptive Sept.
 Control Using Neural Networks and Approximate Models" as part of a B.Sc. thesis at Sahand University of 2007
 Technology, resulting in one technical report.
